

JTS PowerTool Dashboard — User Feature Guide

A non-technical, simple guide to user capabilities and dashboard features.

[Admin Dashboard](#)[Client Dashboard](#)[Role-Based Access](#)

The **JTS PowerTool Dashboard** is a central web-based panel that lets managers, administrators, and clients manage AI assistant operations, team members, projects, security keys, and task approvals.

1. Admin Dashboard (What Managers & Admins Can Do)

1. Track & Control AI Costs

- **See Total Spending:** Watch real-time AI usage costs (\$ USD).
- **Breakdown Costs:** View spending by Client, Slack Channel, or Team Member.
- **Filter Usage:** Search usage data by user name, workspace, or channel.

2. Review & Approve AI Actions

- **Safety Guardrails:** AI cannot modify files/code without human sign-off.
- **Inspect Changes:** Preview exact lines of code/files to be added or deleted.
- **One-Click Approval:** Click **Approve** to apply or **Reject** to stop.

3. Create & Manage User Accounts

- **Add Users:** Create accounts with username, email, and password.
- **Assign Roles:** JTS Admin, Client Admin, or Client Standard User.
- **Client Folder Binding:** Restrict users to specific client company folders.

4. Organize Slack Channels & Projects

- **Group Folders:** Create project folders (e.g. *Client A*, *Client B*).
- **Sync Slack:** Automatically discover new Slack channels with the AI bot.
- **Assign Channels:** Move channels into client folders via simple dropdowns.

Master Infrastructure & System Controls (Master JTS Admin Only)

-  **Manage Security Keys:** Safely store or delete API keys (OpenAI, Anthropic, GitHub, Jira) in an encrypted vault.
-  **Monitor Live Telemetry & Health:** Check service health and watch a live feed of system activities, warnings, and errors.
-  **Inspect AI Conversations & History:** Review past AI prompt sessions, context history, and system prompts.
-  **Manage Saved System Data:** Inspect saved database tables, search records, or delete specific entries when needed.

2. Client Dashboard (What Clients & Team Members Can Do)

1. Track Personal Tasks & Status

- **Task Checklist:** View a list of all requests submitted to the AI.
- **Task Statuses:**
 - **Completed:** Task finished & applied.
 - **Pending Approval:** Waiting for sign-off.
 - **Rejected / Expired:** Action stopped or timed out.

2. Approve Actions for Their Projects

- **Review Proposals:** View file or code changes requested inside their Slack channels.
- **Approve or Reject:** Authorize or decline changes for their own project with a single click.

3. View Personal Activity History

- **Private History:** Look back at past requests, tools executed, and approval dates.
- **Complete Data Isolation:** Clients only see their own project work and cannot access other clients' data or system settings.

Summary: What Can Each Person Do?

WHAT DO YOU WANT TO DO?	JTS ADMIN	CLIENT ADMIN	CLIENT USER
Check AI costs & spending (\$ USD)	 Yes	 Yes (Their Client)	 No
Review & approve AI code/file changes	 Yes	 Yes	 Yes (Their Project)
Create user accounts & assign roles	 Yes	 Yes (Client Users)	 No
Organize Slack channels into folders	 Yes	 Yes	 No
Track personal task list & status	 Not needed	 Not needed	 Yes
Manage API security keys in vault	 Yes	 No	 No
Watch live activity logs & system health	 Yes	 No	 No
Inspect AI chat histories & prompts	 Yes	 No	 No
Manage system database records	 Yes	 No	 No
